

Whole-system workflow

Class Representative · Faculty · Dean · Head Laboratory · Physics Laboratory Staff · Circuits Laboratory Staff

Branches are alternative authorized operations, not mandatory sequential stages. Validate before saving; errors do not create valid transactions. Faculty scheduled activities need no extra approval; routed requests stay Pending until decided. ¹ Only Head manages logs/tasks/clearance; Class Representative only views own-group clearance. Full conditions remain in Tables 3–22.

Process 1.0 — Manage User Access & Accounts

Class Representative · Faculty · Dean · Head Laboratory · Physics Laboratory Staff · Circuits Laboratory Staff

Login and account issuance are alternative operations. Only an already signed-in Head Laboratory issues representative accounts. Faculty delivers emailed credentials outside the system. Invalid credentials create no session; invalid account details create no account.

Process 2.0 — Manage Reservations, Availability & Approvals

Faculty · Class Representative · Dean

Availability alone is read-only. Submit / reschedule continues through validation; cancellation enters validation directly. Faculty scheduled activities need no extra approval. Routed requests remain Pending until decided; wrong-role, conflicting or incomplete inputs return correction without a valid change. Exact Class Representative-to-Dean escalation remains pending.

Process 3.0 — Answer Laboratory Questions

Class Representative · Faculty

Class Representative and Faculty only. Question scope determines which records are read; no reservation is submitted, changed or approved. Unsupported questions are declined and missing evidence is reported as unavailable. Knowledge-base ownership remains pending.

Process 4.0 — Manage Equipment & Borrowing

Head Laboratory · Physics Laboratory Staff · Circuits Laboratory Staff

Branches are alternative operations, not a mandatory inventory → issue → return → disposal chain. Validate authorization, status, quantities and physical condition before committing changes. Broken / lost equipment goes to Head Laboratory for clearance review. Staff cannot raise or settle clearance; equipment cannot be consumed.

Process 5.0 — Manage Laboratory Administration & Reporting

Head Laboratory · Class Representative

Schedule, usage / daily tasks, clearance and reporting are independently selected operations. Only Head Laboratory manages or settles records; Class Representative only views own-group clearance. Faculty and Laboratory Staff do not access these administration actions. Reporting is non-AI; completion after clearance settlement remains pending.

Whole-system workflow

Class Representative · Faculty · Dean · Head Laboratory · Physics Laboratory Staff · Circuits Laboratory Staff

Deployment — technology-neutral design

Documented functions; candidate node placement. No implementation or hosting selection is asserted.

The current paper says construction has not begun and the ERD is pending. The documentation site's hosting and the paused collaboration-workspace draft are not the proposed laboratory application stack.
